

The state in which app gets loaded is called initial state

Which type of application have "multiple stores"? Ngrx rxjs redux

\_\_\_\_\_ is popular State Management Library. @ngrx/store

\_\_\_\_\_ is similar to @ngrx/effects, as both are models for performing side-effects  
redux-saga

@ngrx is a utility toolkit built upon principles defined by redux

Which component is interacts with services? Smart components

Which of the following is needed to add side-effect capabilities to your application? @ngrx/effects

Who handles async calls? Effects

Reducers should be pure functions, meaning they should not generate ----- side effects

\_\_\_\_\_ is single immutable data structure store

Reducers take the previous state and \_\_\_\_\_ to compute the new state action

You install ngrx using which command? npm install @ngrx/core @ngrx/store --save

Dumb Component communicates events to Smart Component through @Output

State can be only mutated through reducers

ngrx leans heavily on Observable paradigm. True
